

43rd IMO 2002

A1. S is the set of all (h, k) with h, k non-negative integers such that $h + k < n$. Each element of S is colored red or blue, so that if (h, k) is red and $h' \leq h, k' \leq k$, then (h', k') is also red. A type 1 subset of S has n blue elements with different first member and a type 2 subset of S has n blue elements with different second member. Show that there are the same number of type 1 and type 2 subsets.

A2. BC is a diameter of a circle center O . A is any point on the circle with $\angle AOC > 60^\circ$. EF is the chord which is the perpendicular bisector of AO . D is the midpoint of the minor arc AB . The line through O parallel to AD meets AC at J . Show that J is the incenter of triangle CEF .

A3. Find all pairs of integers $m > 2, n > 2$ such that there are infinitely many positive integers k for which $k^n + k^2 - 1$ divides $k^m + k - 1$.

B1. The positive divisors of the integer $n > 1$ are $d_1 < d_2 < \dots < d_k$, so that $d_1 = 1, d_k = n$. Let $d = d_1d_2 + d_2d_3 + \dots + d_{k-1}d_k$. Show that $d < n^2$ and find all n for which d divides n^2 .

B2. Find all real-valued functions on the reals such that $(f(x)+f(y))(f(u)+f(v)) = f(xu-yv)+f(xv+yu)$ for all x, y, u, v .

B3. $n > 2$ circles of radius 1 are drawn in the plane so that no line meets more than two of the circles. Their centers are O_1, O_2, \dots, O_n . Show that $\sum_{i < j} 1/O_iO_j \leq (n-1)\pi/4$.
